# Contents

---

<b>Preface</b>	<b>xiii</b>
<b>1 Images with depth</b>	<b>1</b>
The uses of holograms	2
<b>2 How a hologram works</b>	<b>4</b>
Photography in three dimensions?	4
Electromagnetic waves	5
Visible electromagnetic waves	6
The problem defined	6
The solution	8
Interference	8
Encoding phase and amplitude	9
Retrieving the image	11
Diffraction	11
Reconstructing the object beam	12
Laser transmission holograms	13
Effect of emulsion thickness	14
Reflection holograms	15
Principles of exposure and processing	16
The photographic process	17
<b>3 Making your first hologram</b>	<b>18</b>
Equipment for making basic reflection holograms	18
The laser	19
Laser safety	19

Expanding the laser beam	19
A Denisyuk set-up	20
The filmholder	20
Film	20
Subject matter	21
Setting up	21
The processing area	22
Loading the film	23
Processing solutions	23
Exposing	23
Processing	23
The pseudoscopic image	24
Displaying your hologram	25
What went wrong?	25

## **4 Refining the set-up**

**28**

Additional equipment for improved holograms	28
Improving the situation	29
A side-ways set-up	29
Front-surface mirrors	30
Filmholder	30
Eliminating internal reflections	30
Polarization	31
Finding the polarization of your laser	32
Random polarization	32
Finding the Brewster angle	32
A rear-surface relay mirror system	33
Index-matching fluid	33
Safelight	33
Mounting the film on the carrier glass	34
Exposure	36
Processing	37
Pre-soak	37
Development	37
Bleaching and washing	38
Drying	38
Images in different colors	38
A real-image hologram	39

---

<b>5</b>	<b>Extending the horizon</b>	<b>41</b>
	Requirements for single-beam frame holography	41
	Buying a laser	42
	Overhead lighting with a single beam	42
	Making gravity work for you	43
	The single-beam frame	44
	Spatial filtering	45
	Pinhole sizes	45
	Aligning a spatial filter	47
	Making holograms with the single-beam frame	48
	Two processing refinements	49
	Haze elimination	49
	Pre-swelling	49
	Improving the subject illumination	51
	Beam intensity ratio	51
	Assisted single-beam configuration	52
<b>6</b>	<b>Taking single-beam techniques to the limit – 1</b>	<b>54</b>
	360° holograms	54
	Overhead-beam holograms	54
	Further requirements for set-ups	55
	Conical holograms	55
	Circular polarization	57
	Cylindrical Denisyuk holograms	59
	Transfer holograms	59
	The transfer principle	59
	The master hologram	60
	The transfer hologram	60
	Processing the transfer hologram	61
	Displaying the hologram	61
	Contact copying holograms	62
<b>7</b>	<b>Taking single-beam techniques to the limit – 2</b>	<b>63</b>
	Multi-image and multi-channel holograms	63
	Further requirements for set-ups	63

Multi-image techniques	63
Multi-channel techniques	65
Stereoscopic holograms	66
Laser transmission holograms with a frame	68
Measuring the beam ratio	69
Exposing and processing	71
Photographic density	71
Transfer transmission holograms	72
Full-aperture transmission image holograms	73
A 360° cylindrical transmission hologram	74

## **8 The table and its equipment 75**

Choosing a suitable site	75
Types of holography table	76
Purpose-built optical tables	76
Other tables	76
Do-it-yourself tables	76
Sand table	76
Hard-surface table	78
Isolation supports for holographic tables	79
Tables with legs	79
Slab tables	81
Draft exclusion	81
Interferometric test for stability	82
Measuring the coherence length of your laser	84
Holders for optical components	84

## **9 Master holograms without a beamsplitter 86**

The bypass principle	86
Setting up a bypass transmission hologram	86
Requirements for a bypass transmission hologram	86
Plateholders	87
Setting out the table	88
A remotely-controlled shutter	90
Deep images	90
Other options for subject lighting	91
Master hologram format	92

- 
- 10 Rainbow holograms 93**
- Principle of the rainbow hologram 93
    - How a rainbow hologram works 93
  - Setting up for a rainbow transfer hologram 94
    - Additional components required for rainbow holograms 94
      - The beamsplitter 95
  - Setting out the table 96
  - Beam path matching 97
  - Inspecting the completed hologram 98
  - Multi-image rainbow holograms 98
- 11 Reflection transfer holograms 100**
- Additional equipment required for reflection transfer holograms 100
  - Setting out the table 100
  - Reflection transfers from weak master images 102
  - Use of a collimating mirror 103
    - Mounting a collimating mirror 104
  - Masters with non-standard reference beams 104
  - Multi-image transfer holograms 105
  - The design of an image 106
    - Keyhole holograms 106
- 12 Master holograms using elevated beams 108**
- Creative lighting 108
    - Further equipment needed for advanced mastering layouts 109
  - The raised frame 109
    - Parts list for a KeeKlamp support system 110
  - Support for the overhead collimating mirror 111
  - Draft exclusion 111
  - Layout for mastering 111
    - Beam-spreading devices for subject illumination 113
    - The half-wave plate 114
  - Using holographic plates 115
    - Finding the emulsion side 115
    - Cutting up glass plates 115
  - Other configurations 117
    - Backlighting 117

---

Subject matter lying flat	117
Faults in master holograms	119
<b>13 Holographic interferograms</b>	<b>120</b>
Double-exposure interferograms	121
Real-time interferometry	122
Sandwich holography	122
Time-averaged interferograms	124
Strobed interferometry	124
Interferometry in industry	125
<b>14 Holograms with lenses</b>	<b>128</b>
A one-step image hologram	128
Focused-image holograms	129
Reflection holograms	129
Transmission holograms	130
The lens laws	131
One-step rainbow holograms	132
Focused-image holograms with other lenses	132
Lenses within the image space	132
Image reduction	133
<b>15 Home-made optics</b>	<b>134</b>
Liquid-filled lenses	134
A collimating lens for rainbow holograms	134
Building the collimator	135
Two-dimensional collimating lens for full-aperture transfer holograms	136
Thick lenses for focused-image holograms	137
What to do if your lens leaks	137
Holographic optical elements	137
Holographic diffraction gratings	138
Holographic lenses	138
A holographic reflection variable beamsplitter	139
A holographic collimating mirror	140
<b>16 How to display holograms</b>	<b>141</b>
Mounting and framing reflection holograms	141

Displaying reflection holograms	142
Mounting and displaying transmission holograms	143
Holograms in lectures	143
Photographing holograms	144
Equipment	144
Reflection holograms	145
Image quality	146
Using flash	147
Transmission holograms	147
Presenting slides	149
Copyright	149

## **17 Advanced techniques** **150**

Scanning methods for contact copying	150
Pseudocolor holograms	152
Rainbow holograms	152
Reflection holograms	153
Achromatic holograms	153
Dichromated gelatin holograms	154
Holography with lasers other than HeNe	155
Argon-ion	155
Krypton-ion	155
Helium-cadmium	155
Semiconductor and YAG	156
Ruby pulse	156
Fiber-optics techniques in holography	157
Fringe stabilization	158
True-color holography	159
Holographic stereograms	160
Embossed holograms	162
Conclusion	164

## **Appendix 1 Safety with lasers** **165**

## **Appendix 2 Processing formulas** **167**

Developing solutions	167
Metol-ascorbate developer	167
Pyro-metol developer	168

---

Bleaching solutions	169
Reversal bleach	169
Rehalogenating bleach	169
Haze removal	170
Pre-swelling solution	170
Dichromated gelatin	171

<b>Appendix 3</b>	<b>Further study</b>	<b>172</b>
	Books	172
	Periodicals	173
	Research publications	173
	Courses on holography	173
<b>Appendix 4</b>	<b>Suppliers of holographic equipment and materials</b>	<b>175</b>
<b>Appendix 5</b>	<b>Glossary of terms</b>	<b>178</b>
	<b>Index</b>	<b>187</b>
